

Supplementary Figure S1. Violin plots of the expression levels of miRNAs expressed in human or mouse lungs

(A) Violin plots of the expression levels of all miRNAs expressed in human or mouse lungs with TPM values ≥ 1 . (B) Violin plots of the expression levels of miRNAs expressed in human or mouse lungs with TPM values ≥ 1 , with an expanded range including TPM values below ≤ 500 . Pink arrowheads indicate TPM values = 100, which is set as the threshold for effective miRNAs.

Supplementary Figure S2. Correlation between the expression and the ratio of 5' nucleotide (U or A).

A positive correlation between the expression and the ratio of the 5' nucleotide (U or A) is clearly observed.

Supplementary Figure S3. Violin plots of the expression levels of miRNAs whose 5' end is C or G.

Violin plots of the expression levels of miRNAs whose 5' end is C or G expressed in human or mouse lungs with TPM values ≥ 1 . Pink arrowheads indicate TPM values = 3000, which is set as the threshold for effective miRNAs whose 5' end is C or G.

Supplementary Figure S4. The nucleotide contents of genes encoded in MPIV or HPIV.

The nucleotide contents of genes encoded in MPIV or HPIV were analyzed, and the ratio of each nucleotide was shown in a different color.
